

Zirconia Veneer Application Solution

Aesthetic Veneer Restoration

Equipment Configuration: BSM-M5 PRO, BSM-LP2000, BSM-500DW, BSM-FC30, BSM-PF10

Material Configuration: BSM-3D Aconia Ultra, BSM-Zirbond, BSM-Artamic Stain/ Glaze, BSM-Dental Model Resin

● Improve Clinical Efficiency, Esthetic Veneers with 3-Hour Delivery

The long waiting time of up to one week in traditional restorative dentistry is drastically shortened to a minimum of 3 hours. No second visit is required for patients, which significantly saves time and greatly improves the convenience and satisfaction of dental clinic visits.

● Enhance Service Experience, What You See Is What You Get

Patients can witness and participate in the personalized staining process, which enhances the customer experience and creates opportunities for service upgrade and price increase.

● Advanced Technique, Zero-Prep Veneers

The fully digital workflow ensures micron-level precise adaptation to achieve zero adjustment for veneers. It not only guarantees medical quality but also reduces reliance on the dentist's personal experience, helping to improve the overall capability of the clinical team.

● Exceptional value for money, Competitive differentiation

One disc of zirconia can mill about 30 veneers. Combined with visual process control to optimize costs, the aesthetic performance is comparable to glass ceramic. It empowers dental clinics to explore the high-value aesthetic restoration market with better cost efficiency.

● BSM-Zirbond: Solving the Bonding Challenge of Zirconia Veneers

Implant Full-Arch Immediate Restoration Application Solution

3-Hour Full-Arch implant rehabilitation with Immediate Loading

Equipment Configuration: BSM-M5 PRO, BSM-LP2000

Material Configuration: BSM-Temporary Crown & Bridge Resin, BSM-Surgical Guide Kit, BSM-Implant Accessories

Immediate Restoration

Efficient & Cost-effective, 3-Hour Rapid Restoration

Realize immediate restoration for edentulous jaws within 3 hours, greatly saving the technician's operation time, significantly reducing comprehensive costs, and comprehensively improving the clinic's receiving and restoration efficiency.

Precise & Controllable, One-Time Seating of Restorations

Leverage edentulous jaw scanning and 3D printing technology to build a full digital closed loop, replacing traditional uncertainty with digital certainty, ensuring precise seating of restorations, simplifying the operation process, and improving patient comfort.

Comfort & Convenience, Recommended by Word-of-Mouth

Patients with edentulous jaws can restore masticatory function and aesthetic appearance on the same day. The revolutionary experience upgrade builds a high-end technical reputation for dental clinics and enhances their differentiation in the market.

Besmile's Chairside Implementation Support System

● A comprehensive training system

Dual Delivery Mode

1

Clinics with In-house Technicians

- Besmile provides comprehensive training to help clients build their own technical teams

2

Clinics Without Technicians / Unwilling to Hire Launching soon

- Undertake clients' design needs through the Besmile Cloud Platform, solving the problem of technical personnel shortage for clinics.

7-day Base Training

- Theory + Hands-on Practice
- Technology Implementation

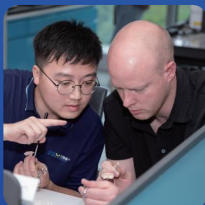

Independent Operation

5-day Clinic On-Site Implementation Training

- Clinic Promotion
- Case Guidance

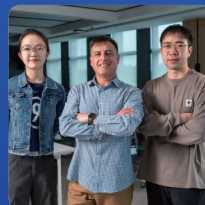

Ensure Smooth Workflow and Efficient Team Collaboration

5-day Design Training

- Crown Design Guidance

For Clinics Willing to Train Technicians

Advanced Specialized Courses

- Covering edentulous jaw implantation, anterior aesthetic veneers and other specialized training courses
- Cultivating technicians' specialized capabilities and helping clinics expand complex clinical services

24/7 Customer Service

365-day Technical Support & After-sales Service

No Worries about After-sales Issues
