Items marked with "*" are required.

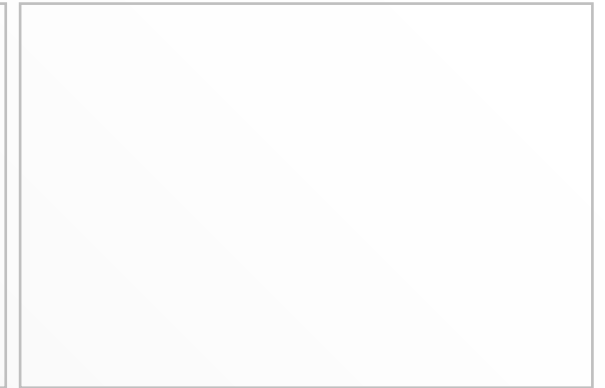

Basic Case Photographs

***Final Restoration**

Final Results on Model

Before/After Treatment (Optional)

Comment

Please write down your comment (at least 3 sentences) about your experience or result.

Photograph Guideline

Photograph Guideline

To ensure professional and consistent visuals suitable for promotional, educational, or case submission purposes, please follow the guidelines below:

Background

- Use a solid black background (preferably matte to avoid reflections).
- Ensure the background is clean and free of distractions.

Lighting

- Use balanced lighting from both sides to avoid strong shadows.
- Softbox lights or ring lights are recommended for soft, even illumination.
- Avoid direct flash to prevent overexposure or glare.

Image Quality

- Use a high-resolution camera or flagship smartphone (minimum 300 dpi, at least 3000 x 2000 pixels).
- The image must be clear and in sharp focus, showing fine anatomical details.
- Clean the tooth model before photographing to avoid dust, fingerprints, or water stains.

Shooting Angles

- Recommended views please see the following slides for reference
- Additional close-up or comparative views can be included if relevant.

Notes:

- Please do not add any watermarks, logos, or text overlays on the image.
- File format: JPG or PNG, with no compression that reduces image quality.
- If submitting clinical cases, please ensure consent is obtained from the patient, technician, and dentist for Besmile to use the photos for marketing or promotional purposes.
